

## Milestone 1

One of the hardest aspects of being a photographer is having locations in which you like to shoot as well as finding new location to keep your portfolio fresh. For this project i want to create an app that will help photographers keep track of their favorite locations as well as find new locations near them that other people have posted about. Photographers will be able to add their locations to a folder as well as explore other locations posted by others and add them to their bucket list. I plan to use fire base so that locations added by other people are accessible to everyone on the platform. After some research there are a few apps that do a similar thing but they only cover the larger cities in the world. This app will be different in the fact that when people post a location they will enter a location tag that will categorize the photo into a collection that is sorted by state. There is a lot to do here but i think that this is an app that many photographer, including me, would use when scouting for new locations.
